

Name:

Answer each of the following questions with complete and coherent, well thought out sentences.

What is one thing Saxon Daugherty shared about drones at PennDOT that surprised or interested you, and why?

There are a lot of regulations and procedures that you need to follow to fly a drone and a bunch of other laws you have to follow. I didn't expect there to be many regulations that you need to follow to fly a drone. There is a bunch of different things that you would have to follow, and I wouldn't want to do all of that just to fly a drone.

How are drones used in real-world jobs like PennDOT, and how does that change your view of drone technology?

They are used to inspect bridges and construction purposes. It changes my view of drone technology that it's not just drones that record things, but they are used for other important purposes like the government. Inspecting bridges for damage and much more.

After hearing the talk, could you see yourself working with drones or similar technology in the future? Explain why or why not.

I would not like to work with drones. Reason number one is that it's too many responsibilities and regulations to follow and other things you need to pass to fly a drone. Also knowing that if something happens and it's your fault you will get into a lot of trouble.
